Payvyn

What's Live Today

Native onboarding & verification for credit unions · by BizFormCorp

Payvyn is a native digital onboarding & verification platform — built, deployed, and running at **payvyn.org**. Everything below is **live and demonstrable right now**, with no third-party aggregator. The items run on the credit union's own rails.

Live now

• LIVE

- ✓ **Secure platform — payvyn.org** HTTPS enforced, installable app (PWA), mobile-ready.
- ✓ **Native identity pre-screen (CIP)** SSN/ITIN validity (rejects invalid & placeholder numbers), age 18+, name, email, phone, U.S. address/state — shown as a per-field checklist.
- ✓ **Native bank linking** 4,143 U.S. banks & credit unions (FDIC), real ABA routing validation, instant + micro-deposit ownership checks — no aggregator.
- ✓ **Core operations console** KPIs, transactions, reconciliation, fraud monitoring, reports, CSV export.
- ✓ **Digital member onboarding** Guided 3-step flow: identity → link bank → fund.
- ✓ **Native OFAC / sanctions screening** Every applicant screened against the real public OFAC SDN + Consolidated lists (40,000+ names); matches flagged for review.
- ✓ **Automatic address autofill** Live address lookup on the identity form.
- ✓ **Production verification backend** Deployed & hardened (attempt-limiting, encrypted storage), secured to payvyn.org.

Why it's different

Native, no aggregator

Runs on the credit union's own rails — no Plaid/MX, no per-link fee.

Deployed today

Not a mockup — live at payvyn.org and demonstrable end-to-end.

Low-cost by design

Validity + sanctions screening are native and free; scales on near-zero infrastructure.

Ready to activate with the credit union

WIRED · DROP-IN

- → **Full identity proofing (SSN-to-person)** — via the CU's existing CIP or SSA eCBSV. Adapters built.
- → **Instant bank-account ownership proofing** — via the CU's rail or a verification provider. Endpoint built.
- → **ACH / FedNow money movement** — micro-deposits & funding over the CU's own ACH (Same-Day). NACHA file generation built.

Each is already wired into the platform — going live is a configuration step with the credit union, not new development.
