Payvyn

Competitive Landscape — Bank-Account Verification

Where Payvyn sits vs. the market · October 2026

Positioning map

Providers & scale (US)

Provider	Type	Scale (public proxy)
Plaid	Aggregator / open banking	500M accounts; ~16B API calls/yr (≈44M/day)
MX · Finicity (Mastercard)	Aggregator	Bank-scale; thousands of FIs
Early Warning	Big-bank network (runs Zelle)	Millions/day across member banks
Akoya · Yodlee · Trustly	Aggregator / open banking	Large, undisclosed
Dwolla · Sila · Stripe	Processor + micro-deposits	Micro-deposit is a fallback feature
Payvyn	**Native (the CU's own ACH)**	**Same-day; no aggregator, no per-link fee**

~15–30
notable US verification providers

~134M/day
ACH payments (the rail; NACHA FY24)

tens of M/day
account verifications, industry-wide

Where Payvyn is different: nearly all of the field **depends on an aggregator** (Plaid/MX) and charges **per connection**. Payvyn verifies ownership **natively, over the credit union's own ACH — no aggregator, no per-link fee, CU-owned.** Only a handful operate in this quadrant. The trade-off is **same-day, not sub-second**, so Payvyn competes on **cost & independence**, not raw throughput.

Payvyn — realistic projection (conservative, illustrative)

Stage	Credit unions	Verifications / day	Funded accounts / mo	Deposits funded / mo	Payvyn revenue (ann. run-rate)
Pilot (Mo 1–3)	1	~20	~600	~$0.24M	~$3.6K
Year 1	3	~60	~1,800	~$0.7M	~$11K

Year 2	8	~160	~4,800	~$1.9M	~$29K
Year 3	**20**	**~400**	**~12,000**	**~$4.8M**	**~$72K**

Assumptions: ~20 verified, funded online account-openings per credit union per day; average funding $400; Payvyn revenue = $0.50 per successful (verified, funded) transaction as the ONLY revenue source (no platform, setup, or other fees). Conservative and illustrative; actuals depend on CU size and ramp.

Infrastructure headroom: even Year-3 volume (~400 verifications/day) sits inside the current **free tier (~500/day)**; the **$5/month** plan supports **~500,000/day** — so Payvyn scales to this entire projection on near-zero infrastructure cost, while aggregator-based rivals pay per connection.
